

DAMG 6210 DATA MANAGEMENT AND DATABASE DESIGN

THRIFTLIST DATABASE MANAGEMENT SYSTEM

TEAM NAME: DATA CREW

TEAM MEMBERS:

ASWATH RANGACHARI
JANANI BALAJI
SHARATH RAVICHANDRAN
SUBBIAH CHERANTHIAN
YAZHINI RAMAKRISHNAN

INTRODUCTION:

Items or things that are intended to throw away can be reused. They can be anything like clothing, footwear, accessories, electronics, furniture, and cars. There are many walk-in thrift stores available but there is still an online demand for shopping used items. A website or an online system can store these records and items which are reusable and can be used again by many customers who are interested in buying them at a cheap price.

PROBLEM STATEMENT:

1. Customers must go to a local store for buying reused items because they don't have access to an online portal for purchasing these items which can be reused
2. Some online platforms like Amazon are mainly focused on new goods and have a limited inventory on used or reusable items. Other platforms like Craigslist lack security and payment options
3. Search conditions or filters do not apply to items since the website is post oriented. We cannot search an item based on item filter like quantities, brand, price etc.
4. Users cannot fetch buyer/seller data or information like review, selling posts, and other information. hence it is anonymous.
5. Users must update or remove the post on their own. An online payment cannot update the post automatically.

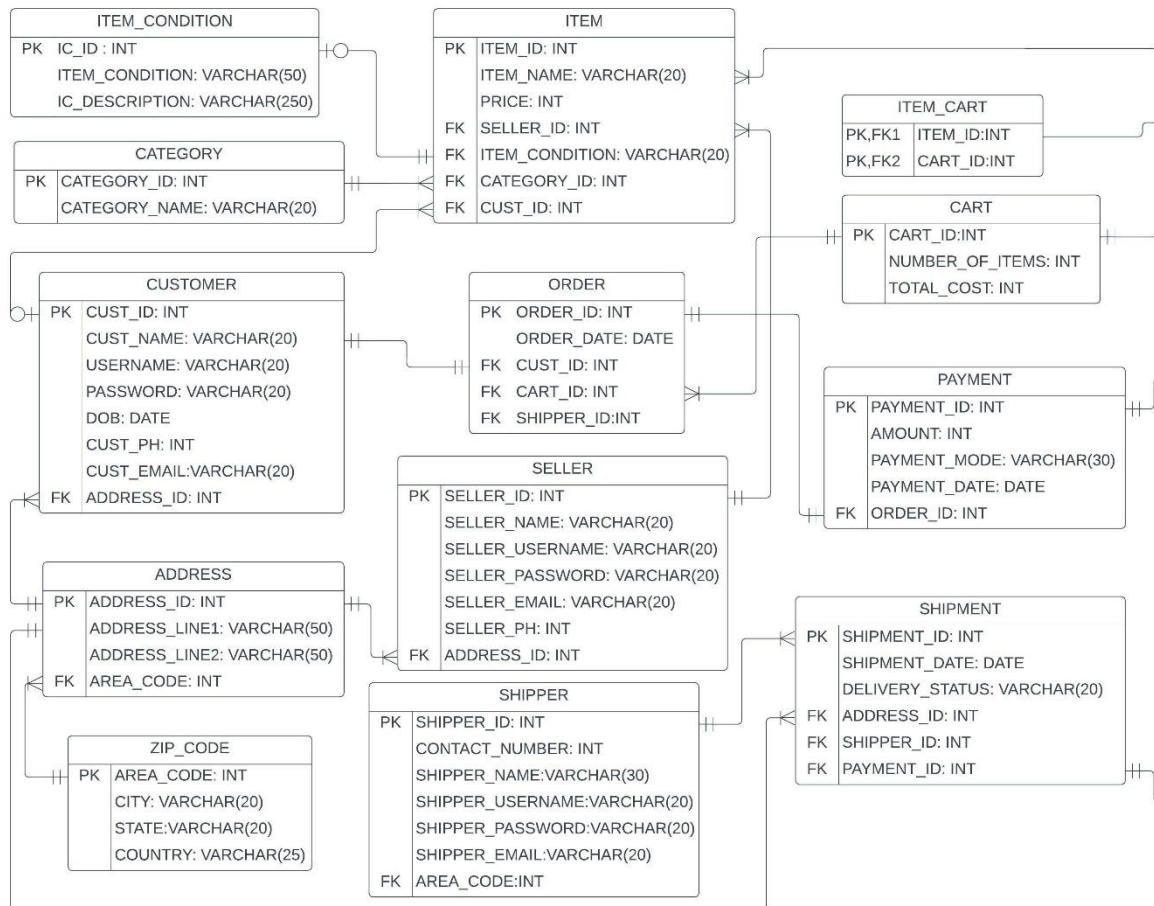

OBJECTIVES:

- Designing a database for selling and buying reusable items. This system consists of the following features:
 - New Users can sign up as a seller or customer using their Username, Password, Mobile Number, and email.
 - Existing or returning users need to login using their username and password.
 - Users can add and update details of an item.
 - The proposed system can be used to store and update all the information regarding the users, i.e., seller, customer, and shipper.
 - This system can also add, view, and update the details of the reusable items for sale.
 - Users can create a deal or bid for the reusable items.
 - Users can view the payment details of the ordered items for payment related activities.

DATABASE DESIGN DOCUMENT:

- There is a demand for an online platform to sell and buy used. This will allow customers to purchase a variety of items at ease online at an affordable range of price.
- This Database design supports a complete online interface with automated process consisting of 12 entities allowing users to sign-up and login as customers or sellers, auction and search items, purchase and payment and shipment and delivery status.
- The search conditions or filters apply to items since the website is item oriented. We can search an item based on item filter like quantities, brand, price etc.
- The category entity has a primary key PK as CATEGORY_ID. The Item entity has the CATEGORY_ID as Foreign Key FK. Hence users can assign an item under a specific category such as clothing, footwear, automobile, etc.
- User can retrieve information regarding the buyer/seller by their ID (CUST_ID, SELLER_ID) as have separate seller and customer entities with the corresponding attributes.
- To prevent duplicate entries when a user registers to the online platform the CUSTOMER/SELLER Entities are created by having their UNIQUE key as CUST_EMAIL and SELLER_EMAIL.
- User can retrieve and fetch data from CUSTOMER Entity and ITEM CONDITION entity regarding customer information and item condition. Item Entity has CUST_ID & ITEM_CONDITION as FOREIGN KEY.
- Users can retrieve a list of items being sold by the same seller as each item has SELLER_ID for SELLER ID as Foreign Key.
- Each payment and cart have a unique payment id and cart id. We created Payment and cart entity to allow a user to prefer checkout method/view cart items, costs etc.
- Items are assigned to a CART. Where it is in order by the customers who are having CART_ID as an FK in ORDER entity.
- Using SHIPPER_ID as FK in SHIPMENT Entity. Shipment which are assigned for a specific shipper can be viewed.

ENTITY RELATIONSHIP DIAGRAM:

ENTITY AND ATTRIBUTES WITH DATA TYPES DEFINED:

1. ITEM ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
ITEM_ID	INTEGER	PRIMARY KEY
ITEM_NAME	VARCHAR(20)	NOT NULL
PRICE	INTEGER	NOT NULL
SELLER_ID	INTEGER	FK which references SELLER_ID from SELLER ENTITY. NOT NULL

ITEM_CONDITION	INTEGER	FK which references ITEM_CONDITION from an ITEM CONDITION ENTITY. NOT NULL
CATEGORY_ID	INTEGER	FK which references CATEGORY_ID from CATEGORY ENTITY. NOT NULL
CUST_ID	INTEGER	FK which references CUST_ID from CUSTOMER ENTITY. NULL ALLOWED

2. ITEM CATEGORY ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
CATEGORY_ID	INTEGER	PRIMARY KEY
CATEGORY_NAME	VARCHAR(20)	NOT NULL

3. ITEM CONDITION ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
IC_ID	INTEGER	PRIMARY KEY
ITEM_CONDITION	VARCHAR(20)	NOT NULL
IC_DESCRIPTION	VARCHAR(250)	NOT NULL

4. CUSTOMER ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
CUST_ID	INTEGER	PRIMARY KEY, AUTO GENERATED
CUST_NAME	VARCHAR(40)	NOT NULL
PASSWORD	VARCHAR(20)	NOT NULL
USERNAME	VARCHAR(20)	UNIQUE KEY, NOT NULL
DATE_OF_BIRTH	TIMESTAMP	CURRENT_TIMESTAMP
CUST_EMAIL	VARCHAR(40)	UNIQUE KEY, NOT NULL
CUST_PHONE	INTEGER	NOT NULL
ADDRESS_ID	INTEGER	FK which references ADDRESS_ID from ADDRESS ENTITY.

--	--	--

5. SELLER ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
SELLER_ID	INTEGER	PRIMARY KEY, AUTO GENERATED
SELLER_NAME	VARCHAR(40)	NOT NULL
SELLER_USERNAME	VARCHAR(20)	NOT NULL
SELLER_PASSWORD	VARCHAR(40)	NOT NULL
SELLER_EMAIL	VARCHAR(20)	UNIQUE KEY, NOT NULL
SELLER_PHONE	INTEGER	NOT NULL
ADDRESS_ID	INTEGER	FK which references ADDRESS_ID from ADDRESS ENTITY. To fetch sellers's address details. NOT NULL

6. ADDRESS ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
ADDRESS_ID	INTEGER	PRIMARY KEY, AUTO GENERATED
ADDRESS_LINE1	VARCHAR(40)	NOT NULL
ADDRESS_LINE2	VARCHAR(40)	NOT NULL
AREA_CODE	INTEGER	FK which reference AREA_CODE from ZIP CODE ENTITY.

7. ZIP CODE

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
AREA_CODE	INTEGER	PRIMARY KEY , NOT NULL
STATE	VARCHAR(20)	NOT NULL
COUNTRY	VARCHAR(24)	NOT NULL

8. CART ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
CART_ID	INTEGER	PRIMARY KEY, AUTO GENERATED
TOTAL_COST	INTEGER	NOT NULL
NUMBER_OF_ITEMS	INTEGER	NOT NULL

9. ITEM_CART ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
ITEM_ID	INTEGER	FK which references ITEM_ID from ITEM ENTITY. To fetch item details. NOT NULL
CART_ID	INTEGER	FK which references CART_ID from CART ENTITY. To fetch cart details. NOT NULL

10. PAYMENT ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
PAYMENT_ID	INTEGER	PRIMARY KEY, AUTO GENERATED
PAYMENT_MODE	VARCHAR(20)	NOT NULL
AMOUNT	INTEGER	NOT NULL
PAYMENT_DATE	TIMESTAMP	CURRENT_TIMESTAMP
ORDER_ID	INTEGER	FK which references ORDER_ID from ORDER ENTITY. To fetch order details. NOT NULL

11. ORDER ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
ORDER_ID	INTEGER	PRIMARY KEY, AUTO GENERATED
ORDER_DATE	TIMESTAMP	CURRENT_TIMESTAMP

CUST_ID	INTEGER	FK which references CUST_ID from CUSTOMER ENTITY. To fetch customer's details. NOT NULL
CART_ID	INTEGER	FK which references CART_ID from CART ENTITY. To fetch cart details. NOT NULL
SHIPPER_ID	INTEGER	FK which references SHIPPER_ID from SHIPPER ENTITY. To fetch cart details. NOT NULL

12. SHIPPER ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
SHIPPER_ID	INTEGER	PRIMARY KEY, AUTO GENERATED
CONTACT_NUMBER	INTEGER	CURRENT_TIMESTAMP
SHIPPER_USERNAME	VARCHAR(20)	NOT NULL
SHIPPER_PASSWORD	VARCHAR(40)	NOT NULL
SHIPPER_EMAIL	VARCHAR(20)	UNIQUE KEY, NOT NULL
AREA_CODE	INTEGER	FK which references AREA_CODE from ZIP CODE ENTITY. To fetch cart details. NOT NULL

13. SHIPMENT ENTITY

ATTRIBUTES	DATA TYPE AND SIZE	COMMENTS
SHIPMENT_ID	INTEGER	PRIMARY KEY, AUTO GENERATED
SHIPMENT_DATE	TIMESTAMP	CURRENT_TIMESTAMP
DELIVERY_STATUS	VARCHAR(100)	NOT NULL
SHIP_METHOD_DESC	VARCHAR(250)	NOT NULL
ADDRESS_ID	INTEGER	FK which references ADDRESS_ID from ADDRESS ENTITY. To fetch customer's address details. NULL ALLOWED
SHIPPER_ID	INTEGER	FK which references SHIPPER_ID from SHIPPER ENTITY. To fetch shipper's details. NOT NULL

PAYMENT_ID	INTEGER	FK which references PAYMENT_ID from PAYMENT ENTITY. To fetch order details. NOT NULL
------------	---------	---

BUSSINESS RULES & LOGIC:

- To sign-up as a customer/seller/shipper, they need a valid username/password/email/phone.
- Each category should have at least one item
- An item can belong to only one category
- Each Item should be associated with an Item condition
- An item condition can be New, used, or refurbished
- An item should be sold to only one customer
- Every account must be linked with one unique email address either buyer/seller/shipper.
- A seller can auction more than one item for sale.
- One valid address is associated with each customer/seller.
- Every customer should have only one item_cart at a time. To create a new cart, they need to check out or remove items in the old cart.
- If you want to check out, the cart cannot be empty.
- More than 15 items cannot be added to the cart.
- For a user check out Cart items will be reserved for 20 minutes. After every 20 minutes it will be made available for other users.
- When a customer confirms the order, they need to complete the payment within the 20-minute session.
- Only one cart is associated with each order.
- Shipment date cannot be prior to payment date.
- Each shipper account should not have more than 8 active shipments.
- Shipping/Delivered/Cancelled are the three delivery status options.

SECURITY CONSTRAINTS (USER LEVEL ACCESS, PERMISSIONS):

The 4 users are Admin, Customer, Seller, and Shipper

ADMIN:

- Access to all the tables
- READ and WRITE permissions to all the tables
- Decide which data is available to the users

CUSTOMER is permitted to:

- ADD, UPDATE, DELETE the information in the Customer table.
- WRITE the Address, Address_zip table
- READ and WRITE the Cart table. A customer can ADD or DELETE items from the cart table.
- READ permission to the Payment table.
- READ only access to Item, Category, Item_condition, Order, Shipment tables.

SELLER is permitted to:

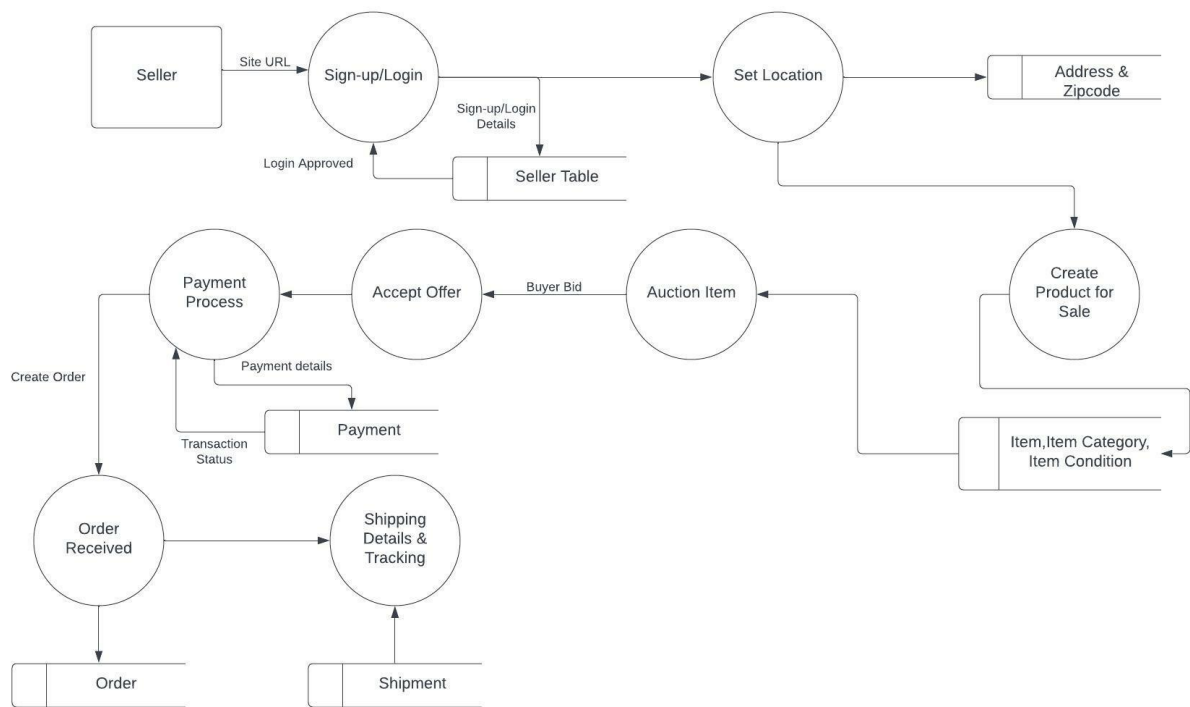

- ADD, UPDATE, DELETE information in the Seller table.
- WRITE permission to the Address table.
- ADD a new address, delete old address in the address table.
- READ and WRITE permissions to the Item, Item_condition tables.
- ADD and UPDATE items in those tables.

SHIPPER is permitted to:

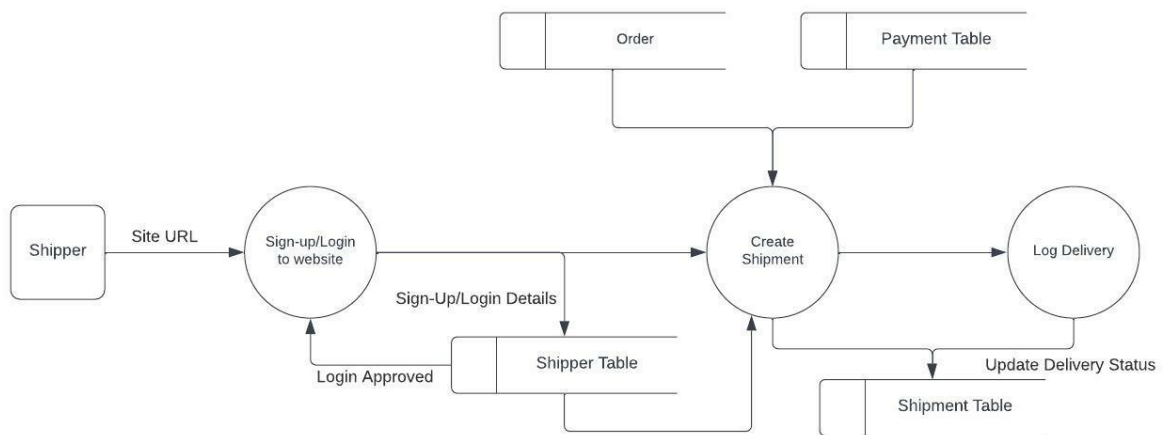

- ADD, UPDATE, DELETE his/her information in the Shipper table.
- READ and WRITE permissions to the shipment table. A shipper can make changes regarding the shipment details in that table.

SELLER MANAGEMENT:

SHIPPER MANAGEMENT:

CUSTOMER MANAGEMENT:

VIEWS:

In our project we have used views to simplify the query complexity and have defined them to retrieve data based on conditions:

View 1: view ITEM_PRICE_CATEGORY

Item_price_category view is defined to retrieve data such as Item_id, name and price and categorise them based on price of an item and defining whether an item is expensive or cheap or affordable.

Creating this view will be helpful for the customers to select the items based on the price and purchase them.

View 2: view CUSTOMER_ORDER_HISTORY

Customer_order_history view is defined to retrieve data such as customer_id, customer_name, order_id from orders and payment table to get the customer orders till date.

Creating this view will be helpful for the customers to find out the orders they have placed and purchased so far.

View 3: view CUSTOMER_ORDER_STATUS

This view is used to determine the Customer order status of the customer with the general information of the customer and order

Creating this view will help the customer to visualize the order status of a product.

OUTPUT:
